DETAILED ACTION

1. The Art Unit location of your application in the USPTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1724.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,2,10 and 11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by either EP reference number 0,948,988A or Wambach et al. (4,254,062), as applied in the EPO Search Report.
4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3-8 and 12-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over either EPO reference number 0,948,988A or Wambach et al. ('062) in view of either EPO reference number 0,924,485 or 0,854,335 or 0,500,040. The claims differ from the disclosure of either EPO reference number 0,948,988A or Wambach et al. ('062) in the source of the mixture

Art Unit: 1724

gas being a semiconductor processing device or process. All three EPO references, 0,924,485, 0,854,335 and 0,500,040 show that gases from such a process can be purified before it is again reused. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to utilize the process and apparatus of either EPO reference number 0,948,988A or Wambach et al. ('062) for a feed gas which includes the components from a semiconductor processing plant or device, in view of the showing of either EPO reference number 0,924,485 or 0,854,335 or 0,500,040, so that the components can be recycled to the process and so that pollutant gases are not discharged into the atmosphere.

6. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over either EPO reference number 0,948,988A or Wambach et al. ('062) in view of WO 99/33540. The claim differs from the disclosure of either EPO reference number 0,948,988A or Wambach et al. ('062) in the chromatographic separation being with a plurality of columns. WO 99/33540 shows that such a plurality of columns can be utilized for chromatographic separation when there are multiple components within the feed gas mixture which need to be separated. It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to structure the separation stage of either EPO 0,948,988A or Wambach et al. ('062) to include a plurality of chromatographic columns in the separation stage or step, in view of the showing of WO 99/33540, so that multiple components can be removed from the feed gas stream.

7. The remaining references listed on the PTO-1449 and those cited on the PTO-892 show art of interest.
